- Obtaining all the necessary permits with the City of Winnipeg.

Community Communication and Safety

- Once the deconstruction manager has been hired we will develop a communication plan for how MIT will provide information to the community and how we will receive feedback from the community.
- We will host a community open house prior to beginning the remediation and deconstruction in order to provide information to the community about what will be happening, what can be expected and the timelines.
- MIT and the deconstruction manager will meet with neighbours immediately surrounding the site to discuss and answer questions regarding how this work may affect their property and day to day routines.
- Unfortunately during this process there will be large trucks and equipment in your neighbourhood for an extended period of time. All remediation, deconstruction and clean-up work will be carried out by qualified, professional contractors. All work will take place during the day and will adhere to the City of Winnipeg's noise bylaws.

Timelines

It is very difficult to say with absolute certainty how long a project of this nature and magnitude might take; however, we anticipate that the work will begin early in 2014 and be completed by the end of 2014.
